

- I can prove triangles congruent by the SSS Congruence Postulate

<p><b>Side-Side-Side Congruence Postulate (SSS)</b></p> <p>If three sides of one triangle are congruent to three sides of a second triangle, then the two triangles are congruent.</p>	<p><b>Example:</b></p> <p>If Side <math>\overline{AB} \cong</math> _____,          Side <math>\overline{BC} \cong</math> _____, and          Side <math>\overline{CA} \cong</math> _____,          then <math>\triangle ABC \cong</math> _____.</p> <div style="text-align: right;"> </div>
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

**Example 1 – Use the SSS Congruence Postulate** Decide whether the congruence statement is true.

a)  $\triangle JKL \cong \triangle MKL$

b)  $\triangle RST \cong \triangle TVW$

Reasons to prove sides are congruent in triangle proofs:

- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

**Example 2 – Use the SSS Congruence Postulate to write a proof.**

Given:  $\overline{AB} \cong \overline{CD}, \overline{DA} \cong \overline{CB}$

Prove:  $\triangle ABC \cong \triangle CDA$

Statements	Reasons
1.	1.
2.	2.
3.	3.
4.	4.

Given  $\overline{FJ} \cong \overline{HJ}$ ,  
 $G$  is the midpoint of  $\overline{FH}$ .

Prove  $\triangle FGJ \cong \triangle HGJ$

Statements	Reasons
1.	1.
2.	2.
3.	3.
4.	4.
5.	5.

**Example 3 – Congruent Triangles in the Coordinate Plane**

a) Determine whether  $\triangle PQR$  is congruent to the other triangles shown at the right.

Use distance formula to find the lengths of the sides:

- |            |            |            |
|------------|------------|------------|
| PQ = _____ | VW = _____ | RS = _____ |
| QR = _____ | WR = _____ | RT = _____ |
| PR = _____ | VR = _____ | ST = _____ |

CONCLUSIONS:
